EXPERIENCE

AR AUTO OASIS: Augmented Reality Based Car Showcase

This project is a website where user can have the experience of viewing the car and its features in their own space using augmented reality. The website also acts as a e-commerce site for buying cars. The augmented reality is created for different car models using Unity3D. The front-end of website is created using HTML,CSS,Js and bootstrap. Back-end is php.

Online shopping management system

It is a Database project where people can buy stuffs through online shopping.. The front-end of the project is developed using HTML CSS JS and backend consists of php and MySQL.

Travelling Salesman Problem

The travelling salesman problem is demonstrated using graphs. This project is implemented through an API namely Open GL and C programming is used.

News Application

It is a mobile application where the user can read news based on different categories. Front-end is developed using XML and back-end is made up of JAVA.

Personal Portfolio

It is a responsive and interactive web page that displays personal profile. It is developed using HTML, CSS and Java Script.
